José ADJOVI

Full-stack web and mobile developer

Abomey-Calavi, Benin — fully remote, UTC+1
joseadjovi67@gmail.com · +229 01 53 22 53 24

Profile

I design and build web and mobile products, from the technical choices through to production. Remote collaboration has been a steady part of that work: I have worked with teams in Belgium, Côte d'Ivoire, Canada and Benin, on products with different constraints and different users.

I am comfortable across the JavaScript and PHP ecosystems, and on mobile with Flutter. What I care about is a product that stays coherent once it is in users' hands: clear interfaces, reliable APIs, and a release that can actually be operated.

Technical stack

Web. Next.js, React, Vue.js, JavaScript.
Back-end. Node.js, Laravel, PHP.
Mobile. Flutter.
Data and operations. Firebase, MySQL, Git, VPS hosting and production releases.

Experience

WhaMak — Founder

SaaS · in progress · remote

WhaMak is a SaaS product for companies that want to centralize and improve how they handle conversations on WhatsApp. I work across the whole technical chain: architecture, back-end, interfaces, API integrations, VPS hosting and production. Building it has meant making the technical decisions myself and staying responsible for what ships.

Agropaire — Development

Brussels · remote collaboration

I took part in a marketplace that brought together a website, a seller application and a courier application. The work sat at the junction of commerce and delivery: several kinds of users, and a product that had to hold together across those surfaces.

Wappii — Development team coordination

Remote

I coordinated a development team around a multi-service platform. The role was as much about keeping the product coherent as about the features themselves: aligning the team on what should be built, and on a result that stayed maintainable.

O’cabs

Abidjan · remote collaboration

Remote collaboration with O’cabs, based in Abidjan, as part of a series of product engagements outside my home city.

Mille Cervo

Remote collaboration

Remote collaboration with Mille Cervo, alongside the other product work described above.

Selected projects

Enfami Soccer · Ruche CI · Aidomiz

I have also contributed to Enfami Soccer, Ruche CI and Aidomiz. Across these projects, and across the commerce, booking, delivery and on-demand platforms I have worked on, the same thread comes back: a feature only matters if it fits the way people actually use the product.

Education

Design engineering degree in energy and process engineering (ingénieur de conception, génie énergétique et procédés). The training is not a software degree. It is where I learned to analyse a technical problem, to keep a project rigorous, and to follow a decision through to its consequences.

How I work

I look for fully remote or remote-first roles, and I work from Abomey-Calavi on UTC+1, which lines up with Central European hours. I am used to writing things down, shipping to a real server, and staying with a product after the first release. I would rather build a smaller surface that holds than a larger one that has to be reworked the week after.

Languages: French and English.
